Examiner's Statement of Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowable for setting forth a method for separating a pane of a brittle material from a moving sheet of material comprising the step of moving the separated pane relative to the moving sheet using gravity as a sole motive force so that the pane and the sheet do not contact each other once separation occurs.

For example, Dryon teaches a method for separating a pane of a brittle material from a moving sheet of material substantially as claimed except for the steps of using gravity to move the pane relatively to the moving sheet.

Claim 5 is allowable for setting forth a method for separating a pane of a brittle material from a moving ribbon of material comprising the step of releasably engaging the moving ribbon within an area defined by the length and the width of the to-be-separated pane, wherein the ribbon is continuously produced and connected at a manufacturing line.

For example, Dryon teaches a method for separating a pane of a brittle material from a moving ribbon of material substantially as claimed except for the ribbon being continuously produced and connected at a manufacturing line. A single panel is fed into an upper conveyor belt and a lower conveyor belt. That panel is not continuously produced and connected at a manufacturing line

Claim 7 is allowable for setting forth a method for separating a pane of a brittle material from a moving ribbon of material comprising the step of moving the ribbon in a vertical direction.

Dryon teaches a method for separating a pane of a brittle material from a moving ribbon of material comprising the step of moving the ribbon in a horizontal direction but not in a vertical direction.

Claims 8, 13 and 16 are allowable for setting forth a method for separating a pane of a brittle material from a moving ribbon of material comprising the step of releasably engagement the moving ribbon within an area defined by the length and width of to-be-separated pane wherein the releasable engagement is a vacuum engagement.

For example, Dryon teaches a method for separating a pane of a brittle material from a moving ribbon of material comprising the step of using an upper conveyor belt and a lower conveyor belt to releasably engage the moving ribbon but not a vacuum engagement.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phong H. Nguyen whose telephone number is 571-272-4510. The examiner can normally be reached on Mon-Fri.
